

Intersectional inequities

across the cancer continuum

Seminar with Prof. Sara Macdonald

School of Health and Wellbeing, University of Glasgow

An expanding body of research documents large social inequalities across the cancer continuum, spanning prevention, detection, diagnosis, treatment, survivorship and palliative care. Yet most of this research is fragmented, focusing either on one stage or on one dimension of inequality. Prof. Sara Macdonald will take a broader, longitudinal perspective and reflect on the accumulation of inequities across the continuum while also highlighting the intersectionality of multiple forms of disadvantage.

Prof. Macdonald is director of Innovation, Engagement and Enterprise at the department of General Practice & Primary Care, University of Glasgow. She is a sociologist researching various stages of the cancer care continuum including perceptions of screening, cancer risk, experiences of treatment burden, and long-term condition management, focusing primarily on marginalised groups.

Join us 15th April 12-13.30 in Meeting Room 6.1, 6K3 . [Click here to sign up.](#)
