Exploring the Diagnostic and Therapeutic Potential of Extracellular Vesicles in Cancer and Beyond

Extracellular vesicles (EVs) have emerged as key players in intercellular communication, delivering molecular cargo and influencing cellular functions in various (patho)physiological processes. Recent research has highlighted the role of EVs in cancer development, progression, and metastasis. This symposium brings together experts from diverse disciplines to explore the evolving field of EVs and their potential as valuable tools in cancer diagnosis and treatment.

Program

Chair: Prof. dr. An Hendrix

Transcriptomics and Genomics in Prostate Cancer

Prof. dr. Guido Jenster

Professor Experimental Urological Oncology, Erasmus MC, Rotterdam, The Netherlands

Heterogeneous platelet-EVs: theranostic opportunities?

Prof. Dr. Pia Siljander

Senior University Lecturer, Molecular and Integrative Biosciences Research Programme, Extracellular Vesicle Research Group, University of Helsinki, Finland

Urinary EVs as biomarkers in human health and disease

Prof. Dr. Janne Leivo

Docent, Department of Life Technologies, InFLAMES Flagship, University of Turku, Finland
